NOTE: If you have landed on this page by clicking on a link from within our Knowledge Center (technical articles) please proceed by selecting a link from this page that best relates to the item you are looking for.

NOTICE: *SCO has suspended new sales and distribution of SCO Linux until the intellectual property issues surrounding Linux are resolved. SCO will, however, continue to support existing SCO Linux and Caldera OpenLinux customers consistent with existing contractual obligations. SCO offers at no extra charge to its existing Linux customers a SCO UNIX IP license for their use of prior SCO or Caldera distributions of Linux in binary format. The license also covers binary use of support updates distributed to them by SCO. This SCO license balances SCO's need to enforce its intellectual property rights against the practical needs of existing customers in the marketplace.*
