EXHIBIT 1

SCO OpenServer UNIX
And it's Use by the US Army to Secure Communications

The OpenServer 5 UNIX operating system by the SCO Group, Inc. is one of the primary applications used in over 400 US Army accounts around the world in the support and defense of worldwide communications security in the Electronic Key Management System (EKMS).

The OpenServer 5 UNIX operating system was chosen by the National Security Agency (NSA) to support the communications security (COMSEC) Local Management Device (LMD) computer application software. The OpenServer 5 UNIX operating system is used not only by the Army but also by all other US military services as well as many of the US Civil Agencies.

There is no option in the near future of replacing the OpenServer 5 operating system and to lose access to the technical support as well as future upgrades, maintenance releases, and patches would be potentially harmful to the internal operations of the EKMS.

Sincerely,

David L. Dickerson, CISSP
Contractor, CACI, Inc
US Army CECOM LCMC CSLA
EKMS Joint Technical Working Group Co-chair
Fort Huachuca, AZ

This letter is not meant to be an official CACI or Government endorsement of any product and is to be used to support SCO in submitting a customer summary to the bankruptcy judge only.

Lindon, Utah 84042-1911
USA

Attn.: Mr. Jeff Hunsaker, President and COO

Dear Mr. Hunsaker,

Let me share our thoughts regarding SCO legal filings and prospects of your company's products usage.

Business Console Ltd. is SCO's premier partner in Russia. Our major customer Russian Savings Bank (Sberbank) is the largest bank in Russia with about 20.000 offices countrywide. The bank's most widely deployed application uses SCO Unix products family for about 10 years.
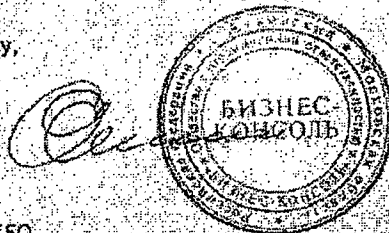

Sberbank considered alternatives to SCO platform in 2005 when they decided to replace then-current SCO OpenServer 5 yet after thorough evaluation and testing they favored SCO OpenServer 6 for its superior reliability, price/performance and well-established support.

The contract between SCO, Sberbank and Business Console covering software purchases and support was signed in October 2007. The bank purchased and installed SCO OpenServer 6 licenses for about 2.500 servers since then. It was confirmed by Sberbank officials during recent meeting in March 2009 that the roll out will continue over years: about 15% of servers in operations become obsolete per year and replacement servers should be equipped with OpenServer 6.

As we have been informed, there is a potential move to put SCO under Chapter 7 (bankruptcy). We like to express, that this step would cause enormous problems for Sberbank and our company. The Bank would need the guarantee for further development and support on SCO OpenServer 6. Evaluating alternative solutions as well as porting the application software counting millions lines of code and rolling out an alternative solution would mean men years of work and high associated costs. This would be a heavy impact to Sberbank's business, especially under the current economic situation in the financial sector.

As such we kindly ask you to continue working on the reorganization plan and get it approved by the Bankruptcy Court in order to let us continue SCO products sales and support for Sberbank.

Yours Sincerely,

Oleg Elenin, CEO
Business Console Ltd.
Moscow, Russia

DTR BUSINESS SYSTEMS

June 1, 2009

Alan Raymond
Vice President
SCO Operations, Inc.
335 South 520 West, Suite 250
Lindon, Utah 84042-1911

Dear Alan,

In regard to the upcoming hearing regarding SCO 's future, I would like to confirm that it is DTR Business Systems' intent to continue to provide our customers with SCO products for years to come.

As a long time partner of SCO representing hundreds of customers using SCO, it would not be in the best interest of our business, nor our customer's businesses to interrupt the availability of SCO products, nor to interrupt the services and support your organization provides to us.

The expense to our customers based on having to replace the products from SCO they currently use would put extreme financial strain at a time when some of our customers simply cannot bear the financial burden. The bottom line is that they would be forced to spend money on something that would provide them with no additional technical functionality.

It is our belief that with a successful reorganization plan in place SCO will receive the full support of its customer base to help it to profitability and long term success. We understand and support your company in its continuing effort to provide stable, dependable technology that we and our customers have selected again and again.

Regards,

Rene' Beltran
Executive Vice- President

ITW Minigrip and ITW Zip Pak have been using an SCO platform for their accounting and production needs since 1991. Not being able to obtain that technology in the near future would force us to find an alternative which will have a big impact on our way of doing business. It would take us a year or more to implement such an alternative that will probably not be as reliable as our current SCO product.

We ask the court to rule in favor of SCO

Hans Daas
IT Manager, ITW Minigrip/Zip Pak

To Whom it May Concern,

This letter comes to you from a completely satisfied customer of the SCO Unix Operating System. BudSco is an agricultural company in Salinas, Ca and has been in business for over 30 years. For more then 20 of the 30+ years we have used the SCO unix system, and it has been an extremely reliable product.

We have upgraded our hardware and software many times, and have never had any down time in doing so. Their service and support teams are always very friendly and professional, which makes using their product an excellent business tool.

We look forward to many more years as a customer of SCO, as their products and people are exceptional.

Lori Hobbs, Controller

Subject: SCO Support Performance

Steve,

As discussed last week, the MOD cannot endorse a private companies products or services. However, we are happy to provide, for your use, the following statement reflecting the technical support provided to us in relation to our various UnixWare applications..

"The MoD Application Service Provider (ASP) has been provided with technical assistance on the Unixware operating system by SCO under a 12 month support contract placed in October 2008 via Software Box. To date, the ASP has raised 7 calls for support under this contract, all of which have been resolved to full satisfaction. From 2003 to 2007, the ASP placed similar 12 month support contracts direct with SCO. Under those contracts, a further 49 help requests were placed on the company, again with a 100% resolution success rate."

Best regards

Mike

To whomever it may concern:

We, the undersigned members of iXorg, Inc, an international non-profit organization founded in 1989 to promote and educate computer system resellers, system integrators and consultants specializing in supporting the UNIX operating system, hereby request that the motion by Novell, IBM, et.al., to move SCO from Chapter 11 to Chapter 7 be denied.

We feel that moving SCO into Chapter 7 will do irreparable harm to iXorg, Inc, its member companies, and the thousands of customers supported by them.

It is critical to our survival and our customers that we have ready access to SCO products, timely updates and bug fixes and support from competent and qualified engineering personnel. In order to continue to support our customers, access to these vital resources must be maintained.

Specifically, our concern is that a move to Chapter 7 will damage SCO's reputation in the industry, causing the loss of both hardware and software vendor support, just when we in iXorg have spent hundreds of man-hours working on reestablishing and solidifying business relationships with these organizations.

Furthermore, we feel a move to Chapter 7 will cause more delays and interruptions in established product timelines and promised deliverables at a time in the economy when we can least afford these delays.

Respectfully submitted on behalf of the 65 member companies of iXorg, Inc.,

The Board of Directors, iXorg, Inc as:
Robert J. Ungaretti, President
Jean-Pierre Radley, Vice President
David Dew, Treasurer
Steve James, Secretary
Paul McNary, Director
Mike Brown, Director
Deepak Thadani, Director

To who concern,

We (InnTech and SCO) have been working since 1990, during those years we were selling and supporting SCO UNIX and we have hundreds of customers and resellers spread all over Mexico, for them and for us would be of utmost importance that the future of SCO's Unix business will remain intact and can serve our customers need for many more years.

Most of the companies who are using SCO Unix it is for mission critical, then those companies need SCO to continue with their operations.

Best regards,

Here's another supportive statement from a UK reseller :

*Chris Netherton, Managing Director, Microtest Ltd, UK*
Microtest Ltd have been using SCO's Unix operating systems for some 25 years as part of our specialist
software applications supplied to the UK National Health Service. Whilst we have the option of migrating
to Linux we know that we would not receive the commitment, level of support, performance or stability
of product for which we have come to rely on with SCO. It is vitally important to us and our customers
that the future of SCO's Unix business remains intact to ensure that we can continue to excel in the
provision of key healthcare systems and serve the needs as a supplier to our GP Health Centres, Primary
Care Trust customers and the UK Government for the foreseeable future.

there will be several (3-5) more letters from ixorg on Wednesday morning. The below 2 letters will be resent on company letterhead on Wednesday:

To whom it may concern:

As a long-time Unix reseller (over 20 years), I am most concerned about SCO being moved to a Chapter 7 bankruptcy and feel that the motion to do so should be denied.

It is critical that SCO be allowed to continue developing new releases of its Unix operating system. Our livelihood depends on being able to procure new Unix licenses from SCO so that we can then resell them. In addition, SCO needs to be able to continue adding new features and support for newer hardware going forward. If we are unable to keep up with new hardware, we will be irreparably damaged because we won't be able to sell new systems and/or networks any more.

The SCO support organization is critical as well because there are operating system issues (from time to time) that cannot be resolved without access to the authors of the code. New releases are a prime example because this is typically when most bugs occur.

Losing the SCO products and support team would basically mean that we are out of business because we have thousands of software programs that would have to be converted to another platform. It would take at least a couple of years to do that.

We would throw ourselves on the mercy of the court and ask that you please don't take our SCO away!

Respectfully yours,

Chendal Coulter

President

Software Sourcery Systems, Inc.
