Gordon v. Microsoft

year old for a day when my regular sitter couldn't one day last month. she lives on 156th just north of Redmond campus. 5 minutes away. she called last week and asked me to let people know she was available periodically. she lives in an apt., has 2 kids (4 and 7), great outdoor play areas. my daughter had a great time there. you might give her a call. (869-8595) let me know if it works out.

Hi Tom,  
I need your help again.  
MSCH of Korea is localizing windows 2.10 and they want to make it check whether the system is real MSDOS or not. If it is not, it should generate a warning message. I talked to philba and davidw, and davidw said you could help us.  
If you read the following emails, I think you will understand our current situation.

Thanks.  
bjbahk

Windows has no such code in it. Since we do not have any code that does this we put up no warnings. However our testers have informed us that we crash while booting Windows if running under some dos not our own.

Tomle can give you checking code for a warning message.

Hi, Jody.

I am a project manager at Far East Product Engineering group. My main responsibility is to support far east subsidiaries (MSKK and MSCH) technically. You have been great help to us and we really appreciate it. Recently, I have an inquiry from Korea about the windows product.

Bill Gates ordered to all application business units to include checking routines of operating environments and if it is Microsoft DOS, nothing will happen. But if it is non MS-DOS (such as DR-DOS), application will display messages saying that "This application has been developed and tested for MICROSOFT MS-DOS. Since you use different environment, this application may not work correctly....."

The question from MSCH is "How to check the DOS is MS-DOS or clone".  
MSCH wants to include such routine in Hangeul Windows so that Hangeul  
windows can run only on Hangeul MS-DOS.  
Could you tell me to whom I can ask to resolve this problem?  
Thanks  
bjbahk/Far East Product Engineering Group

Hello BJ,

We will finish our Windows project before October. Now I must  
decide our product retail Windows spec. Would you please let  
me know how Windows(or other Apps too) check current dos is  
MS-DOS or MS-DOS clone ? And if it is MS-DOS clone how original  
Windows handle them - stop windows, warning messages ?

Thanks, yongchi

Subject: Busmaster interface review  
Date: Fri Jul 03 13:52:50 PDT 1992

I understand the busmaster interface proposed by Ralph Lipe is  
going in front of the architectural review board tomorrow (8/10). I would  
like to talk to you for a moment to find out if you are on that board  
as well as getting your impression of the appropriate process to follow.  
We have not had any previous dealings with the architecture board and so  
are uncomfortable with the lack of any crisp process to gain acceptance of  
the interface.

If you don't object, I would like to call you first thing  
in the morning to talk about this.

Thanks,  
Tom
