In \\worf\scratch\jmail\camend\devproj1.doc

are drafts of the first 3 development projects with Novell

- 1 Lamborghini - Netware client side for non-protect mode
- 2 Cairo - Netware client side for protect mode (Windows-based)
- 3 Pantera - Netware client side for Windows NT
- 4 Formula - Connection to Novell directory system from Cairo
- 5 Transite - Netware support for RPC (memory, security, and transport)

Phrases such as "Licensed Work", "Beta Test Materials", and "Resource Materials" are rigorously defined in the SDA. Basically, Licensed Work says both parties have full rights. Beta Test Materials means information that follows a standard beta test agreement. Resource Materials means information that is used during the development process. Extremely limited rights apply to things in this category.

Please review your respective sections. We want to send this out on Wednesday. Please send comments to tonya since I will be gone until Wednesday. I will review changes with Tony before we send them out.

thanks,  
 jim

what the guy is supposed to do is feel uncomfortable, and when he has bugs, suspect that the problem is dr-dos and then go out to buy ms-dos or decide to not take the risk for the other machines he has to buy for in the office
