Subject: Re: maritz meeting summary

I interpreted our meeting today consistent with Frank's last paragraph. We now have completed our AR and will begin the Java program full force, consistent with the direction to do so without public disclosure.

I take minor exception to the "insurance policy" positioning. I'm OK with that for MS, but Java isn't an insurance policy for us at this time - it's an important component part of a major application strategy. However, I don't think that this needs to be resolved.

I'm assigning about 5 existing ITL people to this, opening reqs for another 3-4, and engaging with IAL's media suppliers to budget resources to include support in their media components, all per the GSR outcome.

I take an additional AR to continue to educate Frank on the merits of Java and the position and motivation of Sun.

On other topics, Richmond will get AR to "win" MS for Intercast architecture convergence at (virtually) any cost,

mcg
