17 **NORTHERN DISTRICT OF CALIFORNIA**
18 **SAN FRANCISCO DIVISION**

19 ORACLE AMERICA, INC.

20 Plaintiff,

21 v.

22 GOOGLE INC.

23 Defendant.

Case No. 3:10-cv-03561-WHA

Honorable Judge William Alsup

**DECLARATION OF SCOTT T.
WEINGAERTNER IN SUPPORT OF
GOOGLE, INC.'S DAUBERT MOTION**

**HIGHLY CONFIDENTIAL --
ATTORNEYS' EYES ONLY**

1 I, Scott T. Weingaertner, declare as follows:

2 I am a partner in the law firm of King & Spalding LLP, counsel to Google Inc. in the
3 present case. I submit this declaration in support of the Google Inc.'s Daubert Motion. I make
4 this declaration based on my own personal knowledge. If called as a witness, I could and would
5 testify competently to the matters set forth herein.

6 1. Attached to this declaration as Exhibit A is a true and correct copy of the Expert
7 Report of Iain M. Cockburn (including exhibits and appendices), served by Oracle America, Inc.
8 ("Oracle") on May 21, 2011. **[FILED UNDER SEAL]**

9 2. Attached to this declaration as Exhibit B is a true and correct copy of Oracle's
10 Technology Tutorial Supplement, dated April 6, 2011.

11 3. Attached to this declaration as Exhibit C is a true and correct copy of the cover
12 document of Oracle's Second Supplemental Patent Local Rule 3-1 Disclosure of Asserted
13 Claims and Infringement Contentions ("Oracle's Infringement Contentions"), served by Oracle
14 on April 1, 2011.

15 4. Attached to this declaration as Exhibit D is a true and correct copy of Exhibit D to
16 Oracle's Infringement Contentions, served by Oracle on April 1, 2011.

17 5. Attached to this declaration as Exhibit E is a true and correct copy of Exhibit G to
18 Oracle's Infringement Contentions, served by Oracle on April 1, 2011.

19 6. Attached to this declaration as Exhibit F is a true and correct copy of Defendant
20 Google Inc.'s Fourth Supplemental Responses to Plaintiff's Interrogatories, Set One, No. 3,
21 served by Google Inc. ("Google") on April 27, 2011.

22 7. Attached to this declaration as Exhibit G is a true and correct copy of an Android
23 Native Development Kit webpage, downloaded from
24 <http://developer.android.com/sdk/ndk/index.html> on June 14, 2011.

25 8. Attached to this declaration as Exhibit H is a true and correct copy of
26 OAGOOGLE0000140295 - OAGOOGLE0000140499, entitled "Form CO relating to the
27 notification of a concentration under Council Regulation (EC) No. 139/2004." **[FILED UNDER**
28 **SEAL]**

1 9. Attached to this declaration as Exhibit I is a true and correct copy of
2 OAGOOGL0002796883, a spreadsheet originally produced in its native format by Oracle.

3 **[FILED UNDER SEAL]**

4 10. Attached to this declaration as Exhibit J is a true and correct copy of
5 OAGOOGL0100030742 - OAGOOGL0100031130, entitled "Oracle Corporation Estimation
6 of the Fair Value of Certain Assets and Liabilities of Sun Microsystems, inc. as of January 26,
7 2010." **[FILED UNDER SEAL]**

8 11. Attached to this declaration as Exhibit K is a true and correct copy of
9 OAGOOGL0000062503 - OAGOOGL0000062726, Oracle Corporation's Form 10-K, filed
10 with the U.S. Securities and Exchange Commission on July 1, 2010.

11 12. Attached to this declaration as Exhibit L is a true and correct copy of excerpts
12 from OAGOOGL0000062097, a spreadsheet originally produced in its native format by Oracle.
13 **[FILED UNDER SEAL].**

14 13. Attached to this declaration as Exhibit M is a true and correct copy of
15 OAGOOGL0100071840 - OAGOOGL0100071986, entitled "SW OEM Pricebook." **[FILED**
16 **UNDER SEAL]**

17 14. Attached to this declaration as Exhibit N is a true and correct copy of a January
18 23, 2001 news press release entitled "Microsoft Reaches Agreement to Settle Contract Dispute
19 With Sun Microsystems," downloaded from
20 <http://www.microsoft.com/presspass/press/2001/jan01/01-23sunpr.mspx> on June 14, 2011.

21 15. Attached to this declaration as Exhibit O is a true and correct copy of a Settlement
22 Agreement and Mutual Limited Release downloaded from
23 <http://www.microsoft.com/presspass/legal/01-23settlement.mspx> on June 14, 2011.

24 16. Attached to this declaration as Exhibit P is a true and correct copy of
25 OAGOOGL0100003277 - OAGOOGL0100003291, a "Stand-Alone TCK License
26 Agreement" entered into by Sun Microsystems, Inc. and Oracle Corporation on March 25, 2004.
27 **[FILED UNDER SEAL]**

28

1 17. Attached to this declaration as Exhibit Q is a true and correct copy of
2 OAGOOGL0100005211 - OAGOOGL0100005221, a “Stand-Alone TCK License
3 Agreement” entered into by Sun Microsystems, Inc. and SAP AG on May 16, 2005. **[FILED**
4 **UNDER SEAL]**

5 18. Attached to this declaration as Exhibit R is a true and correct copy of
6 OAGOOGL0100165699 - OAGOOGL0100165746, a July 6, 2010 Oracle presentation
7 entitled “Q1 FY11 Java Sales Review.” **[FILED UNDER SEAL]**

8 19. Attached to this declaration as Exhibit S is a true and correct copy of an Android
9 timeline, downloaded from <http://www.android.com/timeline.html> on June 14, 2011.

Oracle v. Google
Oracle's Technology Tutorial Supplement
April 6, 2011

Inventions for Performance and Security

- Improved performance
 - RE38,104 (Reference Resolution)
 - “intermediate form [object] code”
 - “resolve” and “resolving”
 - “symbolic [data/field] reference”
 - 6,910,205 (Hybrid Code Execution)
 - 5,966,702 (Class File Redundancy Removal)
 - “reduced class files”
 - 6,061,520 (Play Execution)
 - “play executing step”
 - 7,426,720 (Copy-on-Write Process)
- Improved security
 - 6,125,447 (Fine-Grained Security)
 - 6,192,476 (Call Stack Inspection)

6,910,205 (Hybrid Code Execution)

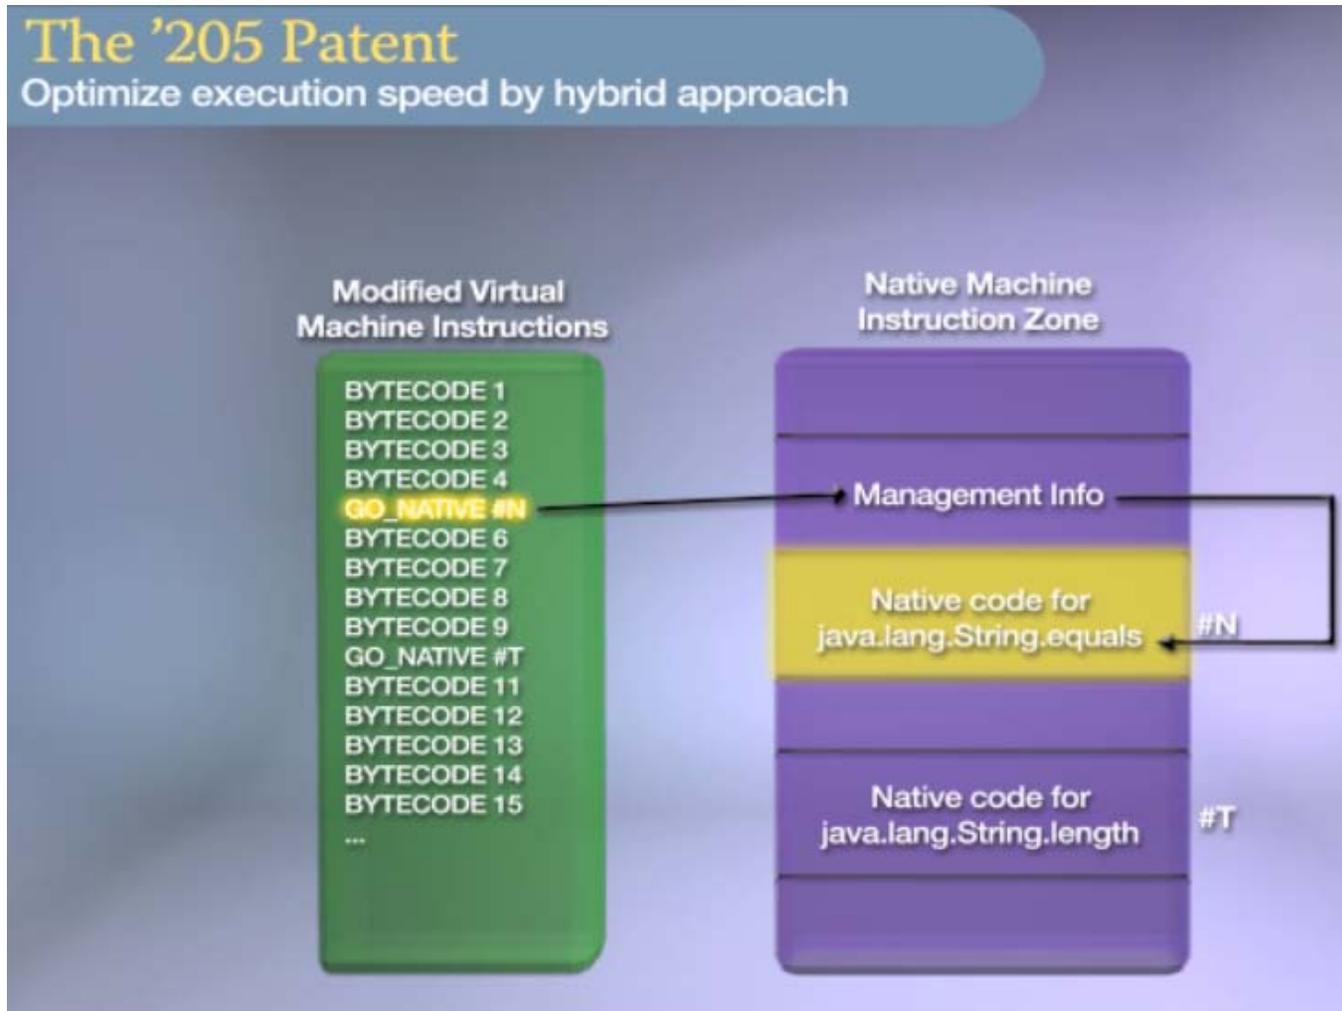

Title: "Interpreting functions utilizing a hybrid of virtual and native machine instructions"

Inventors: **Lars Bak, Robert Griesemer**

Filed: July 12, 2002 (priority date June 30, 1997)

Asserted Claims: 1, 2, 3, 4, and 8

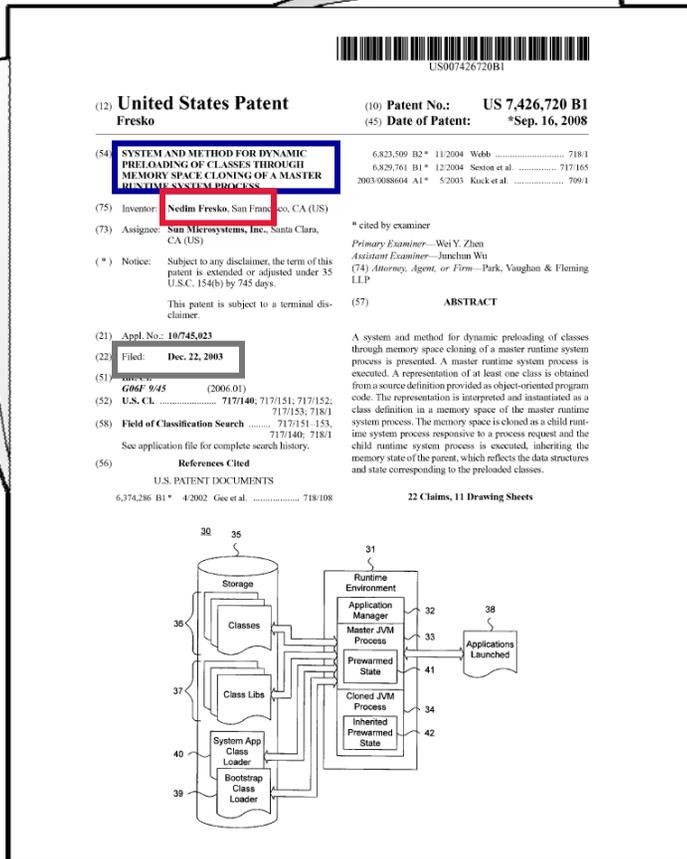

6,910,205: Hybrid Code Execution

6,910,205: Illustrative Claim

1. In a computer system, a method for increasing the execution speed of virtual machine instructions at runtime, the method comprising:
receiving a first virtual machine instruction;
generating, at runtime, a new virtual machine instruction that represents or references one or more native instructions that can be executed instead of said first virtual machine instruction; and
executing said new virtual machine instruction instead of said first virtual machine instruction.

7,426,720 (Copy-on-Write Process)

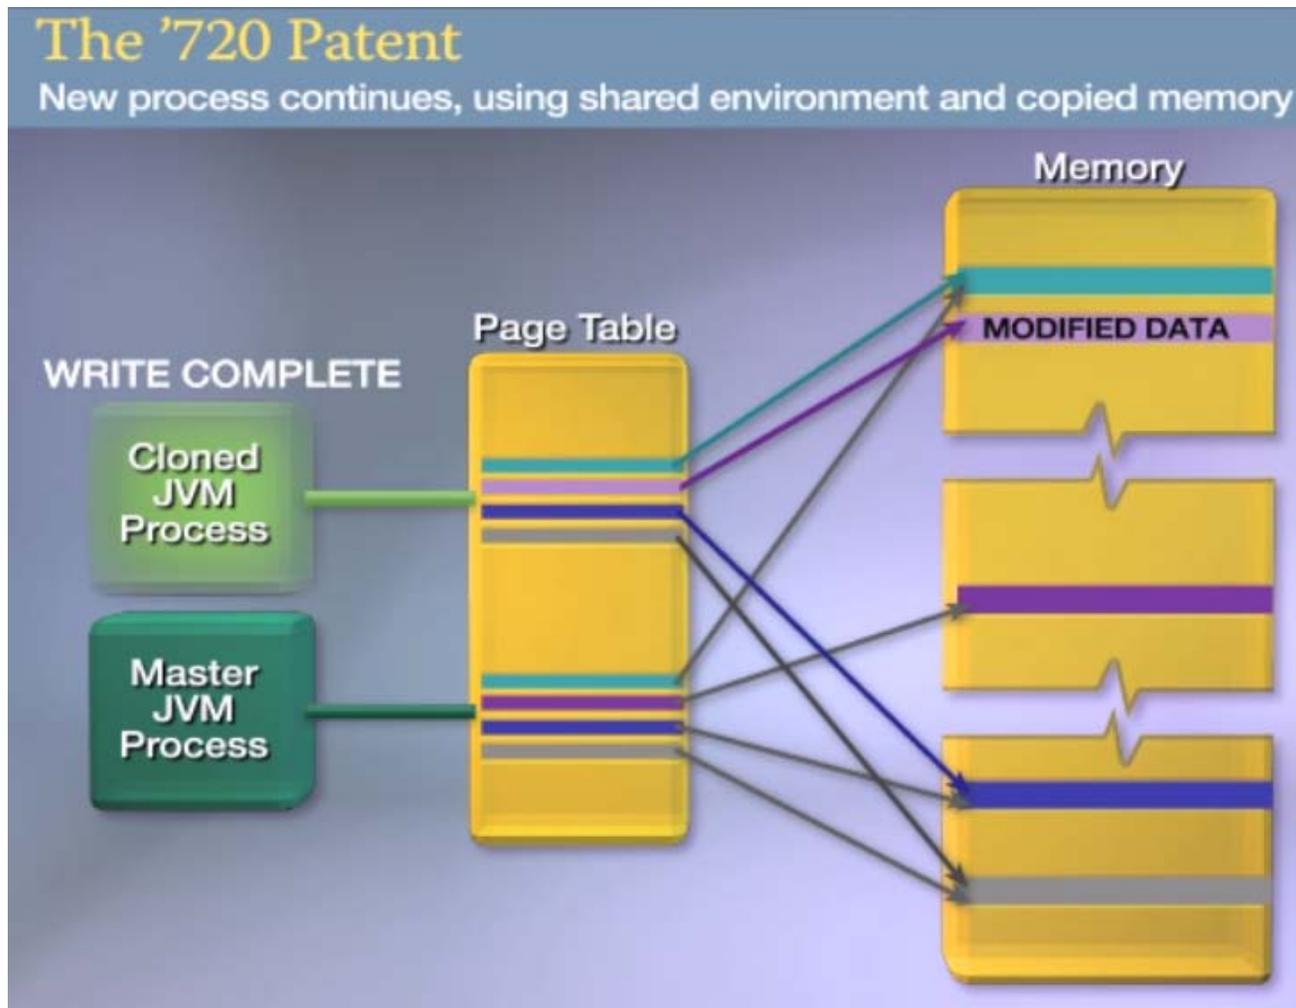

Title: "System and method for dynamic preloading of classes through memory space cloning of a master runtime system process"

Inventor: Nedim Fresko

Filed: December 22, 2003

Asserted Claims: 1-8, 10-17, and 19-22

7,426,720: Copy-on-Write Process

7,426,720: Illustrative Claim

1. A system for dynamic preloading of classes through memory space cloning of a master runtime system process, comprising:
 - A processor;
 - A memory
 - a class preloader to obtain a representation of at least one class from a source definition provided as object-oriented program code;
 - a master runtime system process to interpret and to instantiate the representation as a class definition in a memory space of the master runtime system process;
 - a runtime environment to clone the memory space as a child runtime system process responsive to a process request and to execute the child runtime system process; and
 - a copy-on-write process cloning mechanism to instantiate the child runtime system process by copying references to the memory space of the master runtime system process into a separate memory space for the child runtime system process,
 - and to defer copying of the memory space of the master runtime system process until the child runtime system process needs to modify the referenced memory space of the master runtime system process.

[57] **ABSTRACT**
 A method and apparatus are provided for maintaining and enforcing security rules using protection domains. As new code arrives at a computer, a determination is assigned to a protection domain based on the source from which the code is received. The protection domain establishes the permissions that apply to the code. In embodiments where the code to be executed by the computer belongs to object classes, an association is established between the protection domains and the classes of objects. When an object requests an action, a determination is made as to whether the action is permitted based on the class to which the object belongs and the association between classes and protection domains.

24 Claims, 6 Drawing Sheets

```

    graph TD
      406[Receive class] --> 410{Is a protection domain created for class?}
      410 -- N --> 420[Establish protection domain]
      410 -- Y --> 428[Establish mapping of class to protection domain?]
      428 --> END((END))
  
```

Title: "Protection domains to provide security in a computer system"

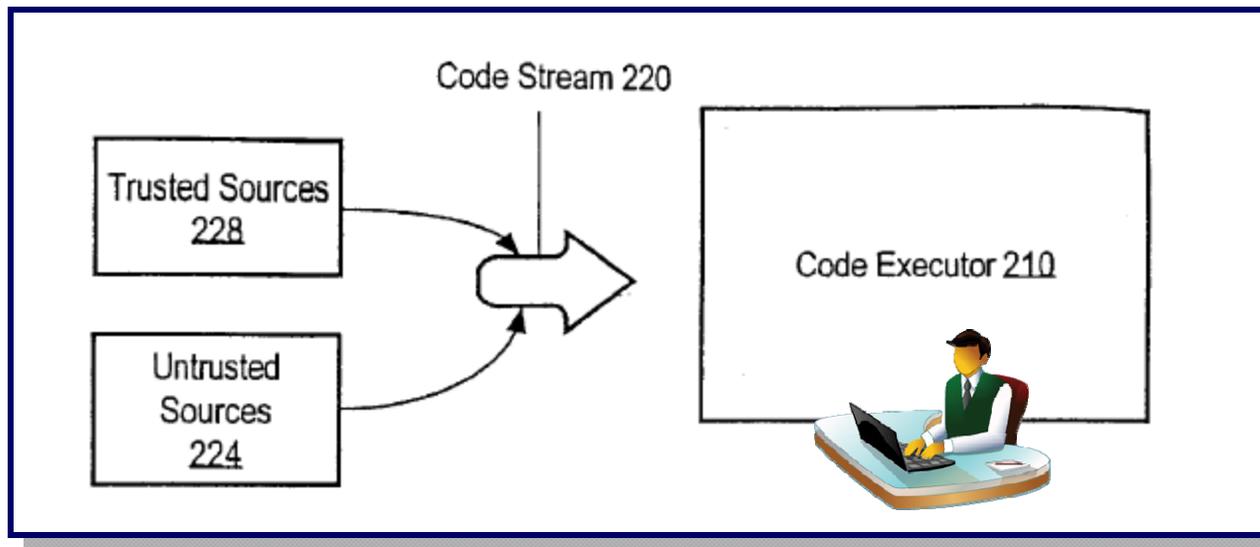

Inventor: Li Gong

Filed: December 11, 1997

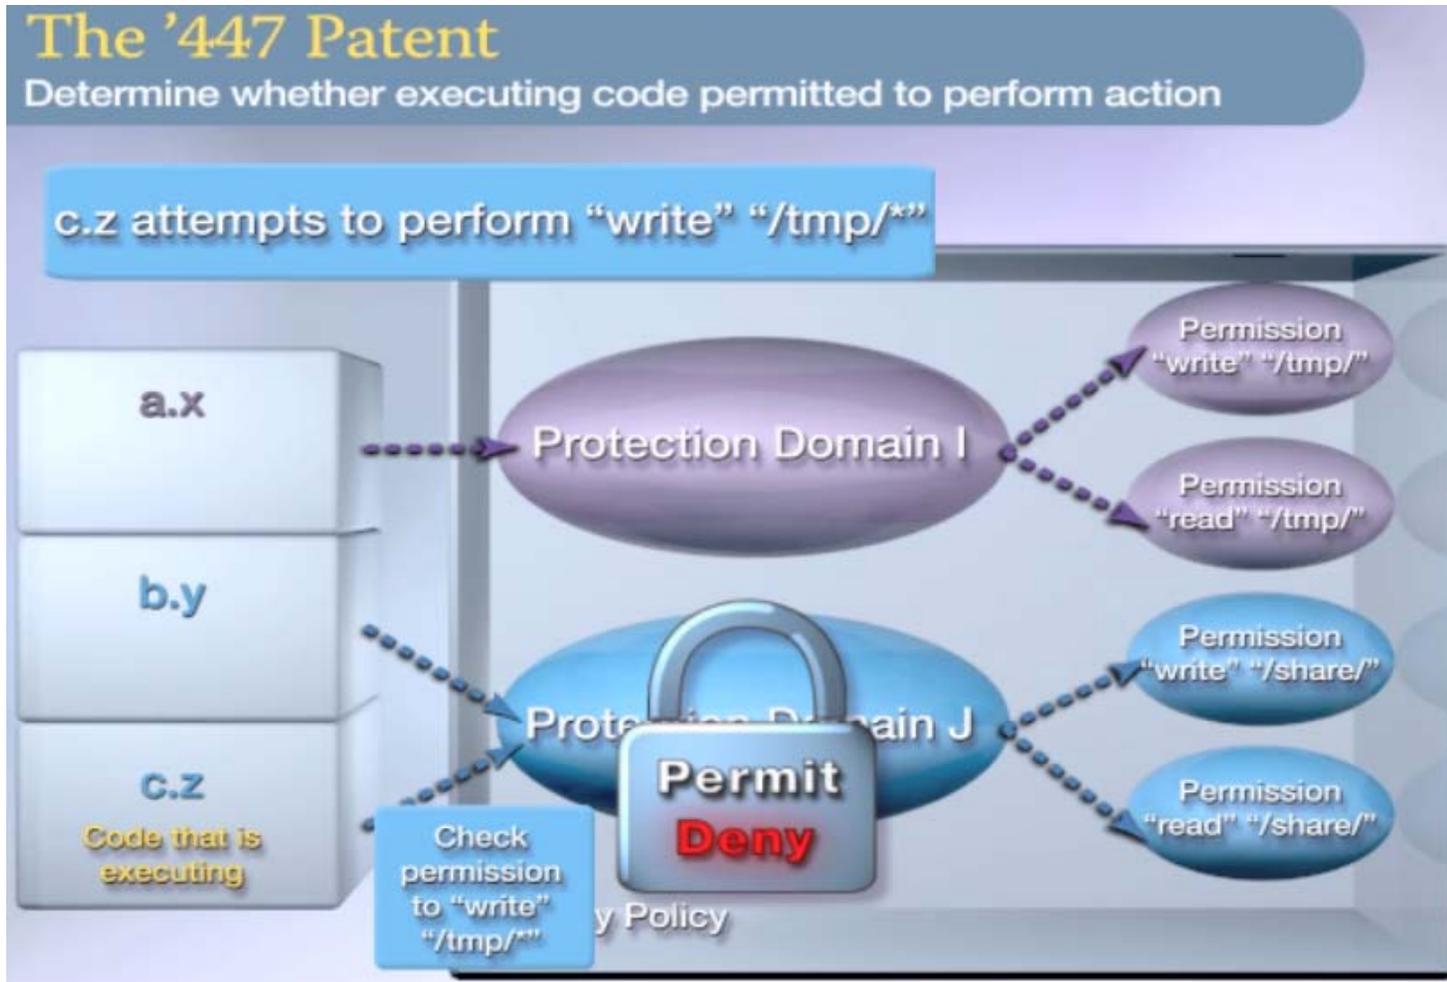

Asserted Claims: 1-24

6,125,447 (Fine-Grained Security)

- End-users download applications from various sources
 - May want to trust applications from certain sources
 - Can't assess whether code is "malicious" (e.g., steal data)
- Executing code may try to perform unauthorized action

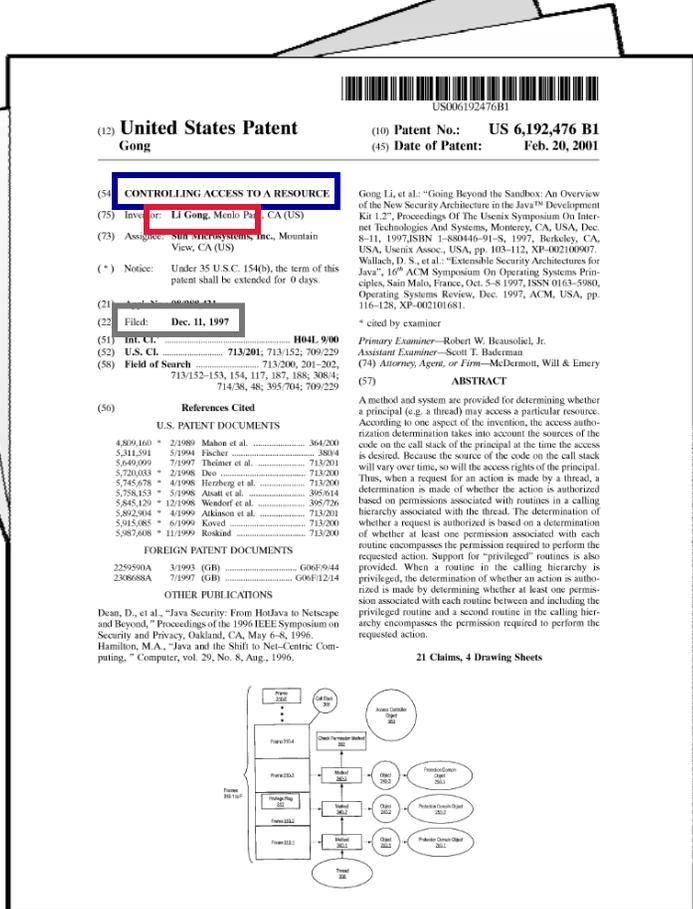

6,125,447: Fine-Grained Security

6,125,447: Illustrative Claim

1. A method for providing security, the method comprising the steps of:
 - establishing one or more protection domains, wherein a protection domain is associated with zero or more permissions;
 - establishing an association between said one or more protection domains and one or more classes of one or more objects; and
 - determining whether an action requested by a particular object is permitted based on said association between said one or more protection domains and said one or more classes.

6,192,476 (Call Stack Inspection)

Title: "Controlling access to a resource"

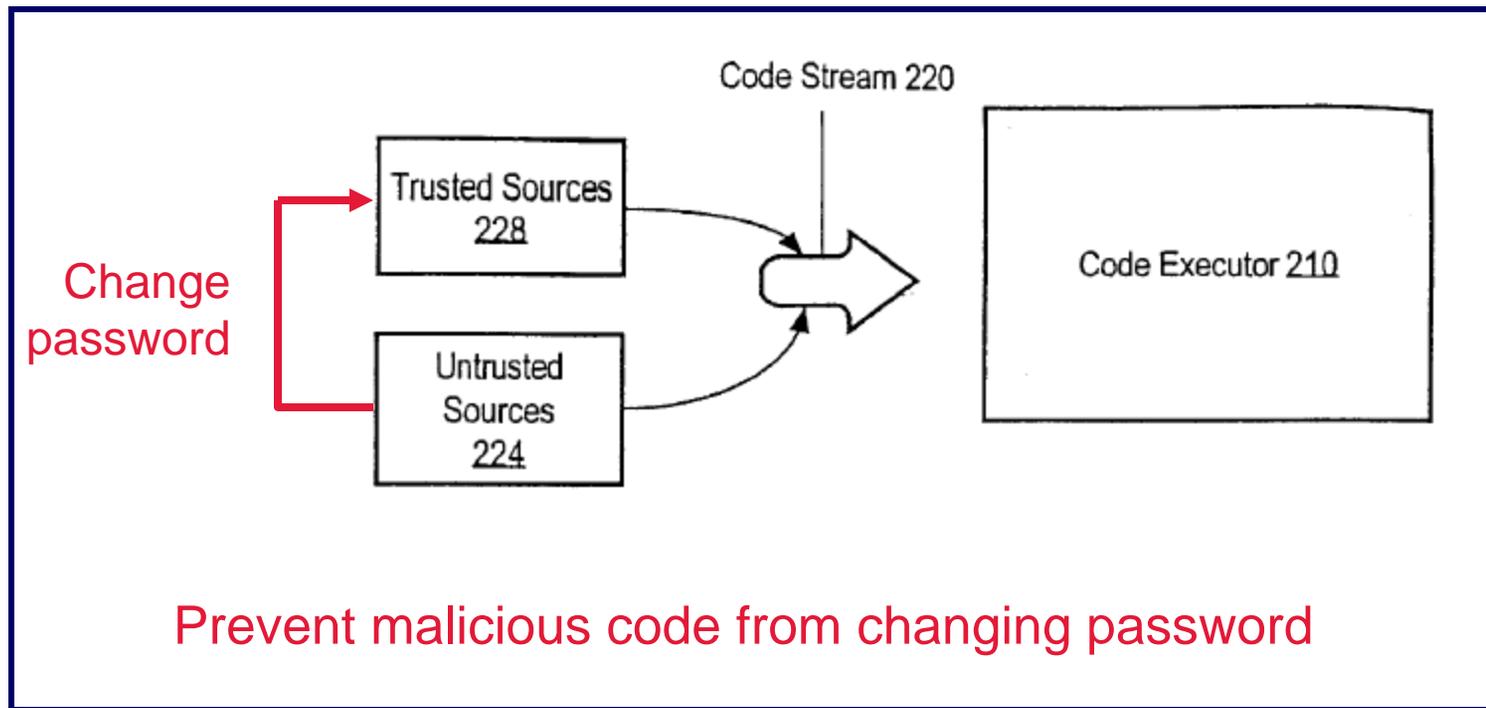

Inventor: Li Gong

Filed: December 11, 1997

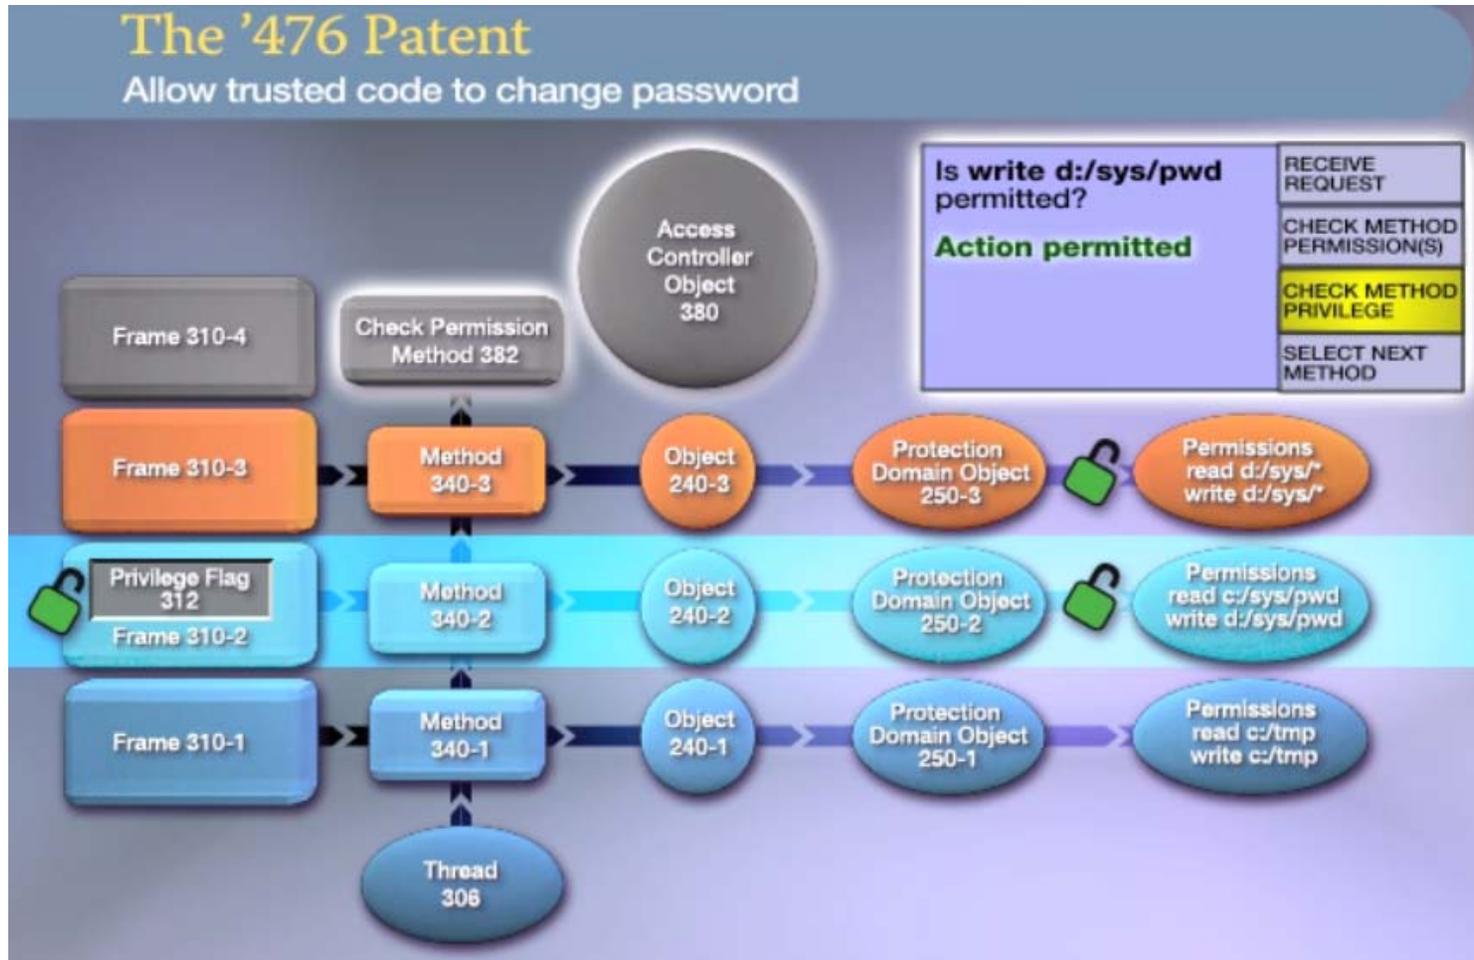

Asserted Claims: 1-21

6,192,476 (Call Stack Inspection)

- Untrusted malicious code may try to invoke trusted code to bypass security protections

6,192,476: Call Stack Inspection

6,192,476: Illustrative Claim

1. A method for providing security, the method comprising the steps of:
detecting when a request for an action is made by a principal; and
in response to detecting the request, **determining whether said action is authorized based on permissions associated with a plurality of routines in a calling hierarchy associated with said principal**, wherein said permissions are associated with said plurality of routines based on a first association between protection domains and permissions.

Case No. 3:10-cv-03561-WHA

**ORACLE'S SECOND
SUPPLEMENTAL PATENT LOCAL RULE
3-1 DISCLOSURE OF ASSERTED
CLAIMS AND INFRINGEMENT
CONTENTIONS**

1 Pursuant to Patent Local Rule 3-1 and agreement between the parties, Plaintiff Oracle
2 America, Inc. (“Oracle”) hereby submits the following Second Supplemental Disclosure of
3 Asserted Claims and Infringement Contentions.

4 Fact discovery is ongoing, and Google has yet to produce substantial quantities of
5 information that may affect Oracle’s infringement contentions. In addition, depositions that are
6 directly relevant to Oracle’s claims of infringement will be scheduled for after the date of this
7 statement. Not all information about the various versions of the Accused Instrumentalities is
8 publicly available. For example, Google has neither released nor produced the source code for
9 Honeycomb, preventing Oracle from analyzing it. Further still, Oracle understands that Google
10 plans to release future versions of the Accused Instrumentalities.¹

11 As such, Oracle’s investigation into the extent of infringement by Google is ongoing, and
12 Oracle makes these disclosures based on present knowledge of Google’s infringing activities. In
13 light of the foregoing, Oracle reserves the right to supplement or amend these disclosures as
14 further facts are revealed during the course of this litigation.

15 **I. DISCLOSURE OF ASSERTED CLAIMS AND INFRINGEMENT**
16 **CONTENTIONS.**

17 **A. Patent Local Rule 3-1(a) — Asserted Claims.**

18 Oracle asserts that Defendant Google is liable under Title 35 U.S.C. § 271(a), (b), (c), and
19 (f) for infringement of:

- 20 • Claims 11-41 of United States Patent No. RE38,104 (“the ’104 reissue patent”)
21 (infringement claim chart attached as Exhibit A);
- 22 • Claims 1, 2, 3, 4, and 8 of United States Patent No. 6,910,205 (“the ’205 patent”)
23 (infringement claim charts attached as Exhibits B-1 and Exhibit B-2);
- 24 • Claims 1, 5-7, 11-13, 15, and 16 of United States Patent No. 5,966,702 (“the ’702
25 patent”) (infringement claim chart attached as Exhibit C);

26
27 ¹ See, e.g., [http://en.wikipedia.org/wiki/Android_\(operating_system\)](http://en.wikipedia.org/wiki/Android_(operating_system)) (last visited March 31, 2011)
28 (Android version “Ice Cream” scheduled for 2011 launch).

1 files to a .dex file when building their applications, and thereby infringe the '520 and '702
2 patents. That is the intended use of the dx tool, and there is no substantial non-infringing use of
3 the dx tool.

4 Google directly infringes the asserted claims enumerated above under 35 U.S.C. § 271(a)
5 because Google, without authority, makes, uses, offers to sell, sells, or imports the Accused
6 Instrumentalities within or into the United States. Further, Google induces the infringement of
7 others under 35 U.S.C. § 271(b) because it contracts with, instructs, and otherwise induces others
8 to make, use, offer to sell, sell, or import the Accused Instrumentalities within or into the United
9 States. Google also contributes to the infringement of others under 35 U.S.C. § 271(c) because it
10 offers to sell, sells, or imports part or all of the Accused Instrumentalities within or into the
11 United States. With respect to the asserted non-method claims of the asserted patents, the
12 Accused Instrumentalities are specially made or adapted for infringement, and are not a staple
13 article suitable for substantial non-infringing use. Further, Google supplies part or all of the
14 Accused Instrumentalities in or from the United States to foreign contractors, including HTC, in
15 violation of 35 U.S.C. § 271(f).

16 Oracle is not aware of any evidence indicating that anyone, such as a Google partner,
17 OHA member, or downstream licensee, has altered the infringing portions of Google's Android
18 or Android Platform in any way that is material to the infringement. To the contrary, all available
19 evidence suggests that device manufacturers do not alter the Android operating system in general
20 or the Dalvik virtual machine in particular; and that the changes they do make are generally
21 aimed at the kernel and device drivers (to account for the manufacturer's particular hardware
22 platform).

23 The manufacturers' websites confirm this. Google advertises the Nexus S as "Pure
24 Google" and "The new Android phone from Google."⁴ Samsung states that "Beacuse Nexus S is
25 google experience device, source codes are opened by Google. So, You can find source code for
26

27 ⁴ <http://www.google.com/nexus/#/index>
28

1 the Nexus S at Android Open Source Project site.”⁵ With respect to Samsung’s Captivate, as far
2 as Oracle has been able to determine, for those Android source code files identified in Exhibits A-
3 G that were present in the source code archive for Samsung’s Captivate, those files were identical
4 to those from Google’s Éclair version of Android.⁶ With respect to the source code for the
5 Motorola Droid, Motorola states “All Droid source consists entirely of code found at the Android
6 repo site.”⁷ With respect to the particular HTC-manufactured devices listed above, the only
7 source code provided by HTC⁸ was for the Linux kernel, WebKit and BlueZ, and there was none
8 for Dalvik, the core libraries, or development tools.

9 Developers have no reason to modify the infringing tools provided by Google for
10 developing Android applications, and Google discourages them from doing so. Google’s
11 Android SDK license states:

12 3.3 Except to the extent required by applicable third party licenses,
13 you may not copy (except for backup purposes), modify, adapt,
14 redistribute, decompile, reverse engineer, disassemble, or create
15 derivative works of the SDK or any part of the SDK. Except to the
16 extent required by applicable third party licenses, you may not load
any part of the SDK onto a mobile handset or any other hardware
device except a personal computer, combine any part of the SDK
with other software, or distribute any software or device
incorporating a part of the SDK.⁹

17 Google actively discourages modifications to core Android features through a variety of
18 licensing schemes. For example, Google prohibits anyone from using the Android trademark on
19 a device unless the device is determined to be “Android compatible.” Through this requirement,
20 Google ensures that Android devices sold by others will function in the same manner as if they

21
22
23 ⁵ <http://opensource.samsung.com/>

24 ⁶ There was just one exception: the Captivate version of the file *fork.c* in the Linux kernel was
25 identical to the default linux 2.6.29 *fork.c*; there were minor differences with respect to the
version of *fork.c* in <http://android.git.kernel.org/?p=kernel/linux-2.6.git>. These differences had no
relation to the infringement by Android that is detailed in Exhibits A-G.

26 ⁷ <https://opensource.motorola.com/sf/sfmain/do/viewProject/projects.droid>

27 ⁸ <http://developer.htc.com/>

28 ⁹ <http://developer.android.com/sdk/terms.html>

1 were running pure-Google Android, whether or not any modifications were made.¹⁰ Most,
2 perhaps all, of the Accused Instrumentalities bear an Android trademark.

3 Google makes it clear that there is no need for anyone to modify the infringing code.
4 According to the New York Times just this week, Andy Rubin said that “Android provided the
5 ‘basic tools’ to allow phone makers to create new models faster, since they did not have to worry
6 about the phone’s software. ‘They can just focus on innovating a better design,’ he said. ‘They
7 don’t have to worry about adding multitasking and managing memory.’” Jenna Wortham,
8 *Phones Try To Stand Out In a Crowd*, N.Y. TIMES, February 16, 2011. Mr. Rubin is correct that
9 phone makers need not worry about providing multitasking and memory management features,
10 because Google has already provided them in Android. It happens, however, that Google’s
11 implementation of these features infringes the ’720 patent, among others.

12 Google’s recent actions in the marketplace demonstrate that Android not an open platform
13 but is instead under Google’s control. Google has so far refused to release the Honeycomb code
14 as open source. Instead, Google has provided Honeycomb only to its preferred partners, to their
15 mutual advantage, and the disadvantage of everyone else. And according to a recent article,
16 “Google has been demanding that Android licensees abide by ‘non-fragmentation clauses’ that
17 give Google the final say on how they can tweak the Android code—to make new interfaces and
18 add services—and in some cases whom they can partner with.” Ashlee Vance and Peter
19 Burrows, *Do Not Anger the Alpha Android*, BLOOMBERG BUSINESSWEEK, March 30, 2011.

20 **C. Patent Local Rule 3-1(c) — Claim Charts for the Accused Instrumentalities.**

21 Served as Exhibits A-G are claim charts that identify where each element of each asserted
22 claim of the asserted patents is found within the Accused Instrumentalities, based on the
23 information currently available to Oracle.

24
25 ¹⁰ <http://source.android.com/compatibility/android-2.2-cdd.pdf> at 8 (“To ensure compatibility
26 with third-party applications, device implementers MUST NOT make any prohibited
27 modifications . . . to these package namespaces: java.*; javax.*; sun.*; android.*;
28 com.android. . . . Device implementers MAY modify the underlying implementation of the
APIs, but such modifications MUST NOT impact the stated behavior and Java-language signature
of any publicly exposed APIs.”)

1 The infringement evidence cited in Exhibits A-G is exemplary and not exhaustive. The
2 cited examples are taken from Android 2.2 or 2.3¹¹ and Google's Android websites. Oracle's
3 infringement contentions apply to all versions of Android having similar or nearly identical code
4 or documentation, including past and expected future releases. Past releases include the Android
5 SDK Preview, 0.9 beta, 1.0, 1.1, 1.5 ("Cupcake"), 1.6 ("Donut"), 2.0/2.1 ("Éclair"), 2.2
6 ("Froyo"), and 2.3 ("Gingerbread"). Oracle's investigation of "Gingerbread" is ongoing, but
7 Oracle notes that Google has not removed the code Oracle previously identified as infringing.¹²

8 Although Oracle's investigation is ongoing, the following summary indicates which
9 versions of Android infringe the asserted claims of the specified patents:¹³

- 10 • the '104 reissue patent (infringement claim chart previously served as Exhibit A):
11 infringed by all versions of Android subsequent to Oct. 21, 2008, including Android
12 1.1, 1.5 ("Cupcake"), 1.6 ("Donut"), 2.0/2.1 ("Éclair"), 2.2 ("Froyo"), and 2.3
13 ("Gingerbread");
- 14 • the '205 patent (infringement claim chart previously served as Exhibit B-1): infringed
15 by all versions of Android subsequent to January 28, 2010, including at least Android
16 2.2 ("Froyo") and 2.3 ("Gingerbread");
- 17 • the '205 patent (infringement claim chart previously served as Exhibit B-2): infringed
18 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5
19 ("Cupcake"), 1.6 ("Donut"), 2.0/2.1 ("Éclair"), 2.2 ("Froyo"), and 2.3
20 ("Gingerbread");
- 21 • the '702 patent (infringement claim chart previously served as Exhibit C): infringed
22 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5

23 ¹¹ Accessed through <http://android.git.kernel.org/> or from Google's production.

24 ¹² Gingerbread continues to not yet be significant in the market when compared to previous
25 versions. As of April 1, 2011, only 2.5% of Android devices checking in with Google were
26 running Gingerbread. <http://developer.android.com/resources/dashboard/platform-versions.html>
(visited Apr. 1, 2011). Most devices are running Froyo or Éclair.

27 ¹³ It appears that the Android git source code repository was created on or around Oct. 21, 2008.
28 As such, the following list of infringing Android versions may be expanded based on what Oracle
learns about earlier Android versions.

1 (“Cupcake”), 1.6 (“Donut”), 2.0/2.1 (“Éclair”), 2.2 (“Froyo”), and 2.3
2 (“Gingerbread”);

3 • the ’447 patent (infringement claim chart previously served as Exhibit D): infringed
4 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5
5 (“Cupcake”), 1.6 (“Donut”), 2.0/2.1 (“Éclair”), 2.2 (“Froyo”), and 2.3
6 (“Gingerbread”);

7 • the ’476 patent (infringement claim chart previously served as Exhibit E): infringed
8 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5
9 (“Cupcake”), 1.6 (“Donut”), 2.0/2.1 (“Éclair”), 2.2 (“Froyo”), and 2.3
10 (“Gingerbread”);

11 • the ’520 patent (infringement claim chart previously served as Exhibit F): infringed
12 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5
13 (“Cupcake”), 1.6 (“Donut”), 2.0/2.1 (“Éclair”), 2.2 (“Froyo”), and 2.3
14 (“Gingerbread”); and

15 • the ’720 patent (infringement claim chart previously served as Exhibit G): infringed
16 by all versions of Android subsequent to Oct. 21, 2008, including Android 1.1, 1.5
17 (“Cupcake”), 1.6 (“Donut”), 2.0/2.1 (“Éclair”), 2.2 (“Froyo”), and 2.3
18 (“Gingerbread”).

19 **D. Patent Local Rule 3-1(d) — Indirect Infringement.**

20 In addition to the acts of direct infringement described above, Google actively contributes
21 to and induces infringement by third parties of each of the asserted claims of the asserted patents.
22 On information and belief, Google purposely and actively distributes the Accused
23 Instrumentalities to manufacturers of products and application developers with the intention that
24 they be used, copied, and distributed to consumers, who in turn use them. Google induces and
25 contributes to the infringement of the asserted claims of each asserted patent, because Google
26 encourages manufacturers, application developers, and service providers (including the members
27 of the Open Handset Alliance), as well as end users, to copy, sell, distribute, re-distribute, and use
28 products that embody or incorporate the Accused Instrumentalities. Google’s admissions in its

1 Amended Counterclaims prove its intent and encouragement of others. (*See, e.g.*, Google's
2 Amended Counterclaims ¶¶ 6-7, 13.) Google contributes to the infringement of others because it
3 offers to sell, sells, or imports part or all of the Accused Instrumentalities within or into the
4 United States. With respect to the asserted non-method claims of the asserted patents, the
5 Accused Instrumentalities are specially made or adapted for infringement, and are not a staple
6 article suitable for substantial non-infringing use.

7 By providing infringing code and discouraging (and even preventing) modifications,
8 Google further demonstrates the intent necessary for indirect infringement. As discussed below,
9 Google has actual knowledge of Oracle's patents and its infringement is willful.

10 **E. Patent Local Rule 3-1(e) — Nature of Infringement.**

11 Oracle asserts that each element or limitation of each asserted claim of each asserted
12 patent is literally present in the Accused Instrumentalities, except where explicitly indicated. To
13 the extent that any element or limitation of the asserted claims is not found to have literal
14 correspondence in the Accused Instrumentalities, Oracle alleges, on information and belief, that
15 any such elements or limitations are present under the doctrine of equivalents in the Accused
16 Instrumentalities.

17 **F. Patent Local Rule 3.1(f) — Priority Dates.**

18 The '104 reissue patent has a priority date of Dec. 22, 1992, being a continuation of
19 08/755,764 (filed Nov. 21, 1996) resulting in RE36,204 which is a Reissue of 07/994,655 (filed
20 Dec. 22, 1992) which is U.S. Patent No. 5,367,685.

21 The '205 patent is a continuation of U.S. Pat. No. 6,513,156, having a priority date of Jun.
22 30, 1997, the filing date of U.S. patent application number 08/884,856.

1 **G. Patent Local Rule 3.1(g) — Patentee’s Asserted Practice of the Claimed**
2 **Inventions.**¹⁴

3 **1. The ’104 Reissue Patent**

4 The following instrumentalities of Oracle practice the asserted claims of the ’104 reissue
5 patent:

- 6 • JDK 1.0 and subsequent versions;
- 7 • JRE 1.1.1 and subsequent versions;
- 8 • HotSpot 1.0 and subsequent versions;
- 9 • Java SE for Embedded 1.4.2_11 and subsequent versions;
- 10 • CDC RI 1.0 and CDC-HI 1.0 and subsequent versions of each;
- 11 • CDC AMS 1.0, 1.0_1, 1.0_2, Personal Basis and Personal Profile versions;
- 12 • CLDC RI 1.0 and CLDC-HI 1.0 and subsequent versions;
- 13 • Foundation Profile 1.0 and subsequent versions;
- 14 • J2EE 1.2 (later called Java EE) and subsequent versions;
- 15 • WTK 1.0 / Java ME SDK 1.0, and subsequent versions of each;
- 16 • Java Real Time 1.0 and all subsequent versions;
- 17 • Personal Profile HI and RI 1.0 and subsequent versions;
- 18 • Personal Basis Profile-HI and RI 1.0 and subsequent versions;
- 19 • PersonalJava 1.0 and subsequent versions;
- 20 • EmbeddedJava 1.0 and subsequent versions;
- 21 • JavaOS 1.0 (all variants, including Java PC) and subsequent versions;
- 22 • Java Card connected platform 3.0 and subsequent versions;
- 23 • Oracle Java Wireless Client (formerly Sun Java Wireless Client) 1.0 and
24 subsequent versions;

25 _____
26 ¹⁴ Oracle’s investigation concerning the identification of instrumentalities that practice the
27 asserted claims of the asserted patents is ongoing. There have been many different products
28 relating to the Java Platform over the years, each having many versions or variants, and the lists
presented below reflect Oracle’s diligent efforts in identifying instrumentalities that practice the
asserted claims of the asserted patents.

- 1 • MIDP 1.0 and subsequent versions.

2 **2. The '205 Patent**

3 The following instrumentalities of Oracle practice the asserted claims of the '205 patent:

- 4 • JDK 1.2 and subsequent versions;
- 5 • JRE 1.2 and subsequent versions;
- 6 • HotSpot 1.0 and subsequent versions;
- 7 • Java SE for Embedded 1.4.2 and subsequent versions;
- 8 • CDC RI 1.0.1 and CDC-HI 1.0 and subsequent versions of each;
- 9 • CDC AMS 1.0, 1.0_1, 1.0_2, Personal Basis and Personal Profile versions;
- 10 • CLDC RI 1.1.1;
- 11 • CLDC-HI 1.0 and subsequent versions;
- 12 • Foundation Profile 1.0.2 and subsequent versions;
- 13 • J2EE 1.2 (later called Java EE) and subsequent versions;
- 14 • Java ME SDK 3.0 EA and subsequent versions;
- 15 • Java Real-Time System 1.0 and all subsequent versions;
- 16 • Personal Profile HI and RI 1.0 and subsequent versions; and
- 17 • Personal Basis Profile HI and RI 1.0 and subsequent versions.

18 **3. The '702 Patent**

19 The following instrumentalities of Oracle practice the asserted claims of the '702 patent:

- 20 • PersonalJava (“PJava”) 1.0 and subsequent versions;
- 21 • EmbeddedJava (“EJava”) 1.0 and subsequent versions;
- 22 • JavaOS 1.0 (and all variants, including Java PC) and subsequent versions;
- 23 • CDC RI 1.0 and CDC-HI 1.0, and all subsequent versions of each;
- 24 • CDC AMS 1.0, 1.0_1, 1.0_2, Personal Basis and Personal Profile versions;
- 25 • CLDC RI 1.1.1 and CLDC-HI 1.0.1, and all subsequent versions of each;
- 26 • Personal Profile HI and RI 1.0 and subsequent versions;
- 27 • Personal Basis Profile HI and RI 1.0 and subsequent versions;
- 28 • Foundation Profile 1.0 and subsequent versions; and

- Java Card platform 2.1 and subsequent versions.

4. The '447 and '476 Patents

The following instrumentalities of Oracle practice the asserted claims of the '447 and '446 patents:

- JDK 1.2 and subsequent versions;
- JRE 1.2 and subsequent versions;
- Java SE for Embedded 1.4.2_11 and subsequent versions;
- CDC RI 1.0 and CDC-HI 1.0, and all subsequent versions of each;
- CDC AMS 1.0, 1.0_1, 1.0_2, Personal Basis and Personal Profile versions;
- Foundation Profile 1.0.2 and subsequent versions;
- J2EE 1.2 (later called Java EE) and subsequent versions;
- Java ME SDK 3.0 EA and subsequent versions;
- Java Real-Time System 1.0 and all subsequent versions;
- Personal Profile HI and RI 1.0 and subsequent versions;
- Personal Basis Profile HI and RI 1.0 and subsequent versions;
- Java Card connected platform 3.0 and subsequent versions.

Additionally, the following instrumentalities of Oracle practice the asserted claims of the '447 patent:

- Oracle Java Wireless Client (formerly Sun Java Wireless Client) 1.1.3 and subsequent versions.

5. The '520 Patent

The following instrumentalities of Oracle practice the asserted claims of the '520 patent:

- CLDC RI 1.1.1;
- Java Card platform 2.1 and subsequent versions; and
- CLDC-HI 1.1.3 and subsequent versions.

6. The '720 Patent

The following instrumentalities of Oracle practice the asserted claims of the '720 patent:

- CDC AMS 1.0, 1.0_1, 1.0_2, Personal Basis and Personal Profile versions.

1 **H. Patent Local Rule 3-1(h) — Willful Infringement.**

2 Google has willfully infringed the patents-in-suit, which are directed to inventions
3 incorporated in the Java Platform. Many factors reveal that Google acted recklessly, *i.e.*, despite
4 a high likelihood that Google's actions infringed a valid and enforceable patent, and that Google
5 actually knew or should have known that its actions constituted an unjustifiably high risk of
6 infringement of a valid and enforceable patent. These factors include:

- 7 • Google is a member of the Java Community Process (JCP) and has a seat on the Java
8 SE/EE Executive Committee. *See* Java Community Process homepage, available at
9 <http://www.jcp.org/en/participation/committee> (last visited Dec. 1, 2010). Through its
10 lengthy participation in the JCP, Google is well aware of the need to obtain a license
11 from Oracle in order to make use of Oracle's Java Platform technologies as Google
12 does in Android. Google's admissions in its Amended Counterclaims prove this
13 awareness. (*See, e.g.*, Google's Amended Counterclaims ¶¶ 6-7, 13.)
- 14 • At least three of the seven inventors named in the patents-in-suit, Robert Griesemer,
15 Lars Bak, and Frank Yellin, have left Oracle and work at Google. Their knowledge is
16 attributable to Google.
- 17 • Andy Rubin, Google's VP of Mobile Platforms, previously worked at Danger, Inc.,
18 which he founded. He understood the need to obtain a license from Oracle (then Sun)
19 to use Java Platform technologies in Danger's Hiptop operating system, and Danger
20 did obtain a commercial license. When Rubin left Danger and founded Android, Inc.,
21 he approached Sun about obtaining a commercial license to Java Platform
22 technologies on behalf of Android, Inc. Those discussions ended without Android
23 having obtained a commercial license. Rubin's knowledge is attributable to Google.
- 24 • Google has consistently resisted taking a license from Sun for Sun's patented Java
25 Platform technologies.
- 26 • In copying Oracle's Java Platform technologies, Google deliberately disregarded a
27 known risk that Oracle had protective patents covering Java Platform technologies.
- 28

- 1 • Google’s Android source code and documentation directly references and copies Java
2 Platform technology specifications, documentation, and source code. *See, e.g.,*
3 `mydroid\libcore\security\src\main\java\java\security\CodeSource.java`;
4 `mydroid\libcore\support\src\test\java\org\apache\harmony\security\tests\support\cert\PolicyNodeImpl.java`. Google admits that Android incorporates a subset of Apache
5 Harmony, which it asserts is “an implementation of Sun’s Java.” (*See, e.g.,* Google’s
6 Amended Counterclaims ¶¶ 6-7, 13.)
7
- 8 • Google’s website content directly references and demonstrates use of Java Platform
9 technologies. *See, e.g.,* “What is Android?”, available at
10 <http://developer.android.com/guide/basics/what-is-android.html> (last visited Dec. 1,
11 2010) (“Android includes a set of core libraries that provides most of the functionality
12 available in the core libraries of the Java programming language.”); Package Index,
13 available at <http://developer.android.com/reference/packages.html> (last visited Dec. 1,
14 2010), and subsidiary webpages.
- 15 • Google’s Android videos directly reference and demonstrate use of Java Platform
16 technologies. *See, e.g.,* Google I/O 2008 Video entitled “Dalvik Virtual Machine
17 Internals,” presented by Dan Bornstein (Google), available at
18 <http://developer.android.com/videos/index.html#v=ptjedOZEXPM> (last visited Dec. 1,
19 2010).
- 20 • As noted above, Google has not removed the code Oracle identified as infringing;
21 Google’s direct and indirect infringement is ongoing.

1 **II. DOCUMENT PRODUCTION ACCOMPANYING DISCLOSURES.**¹⁵

2 **A. Patent Local Rule 3-2(a) — Documents Evidencing Pre-Application**
 3 **Disclosure.**¹⁶

4 Copies of documents produced pursuant to Patent Local Rule 3-2(a) are at
 5 OAGOOGL0000052860-53265, OAGOOGL0000053266 -53749, OAGOOGL0000053750-
 6 53759, OAGOOGL0000059578, and OAGOOGL0000059579-60385. Oracle also directs
 7 Google to three public websites: developer.sun.com, java.sun.com, and www.sun.com. Oracle's
 8 proprietary commercial releases will be made available for inspection subject to a Protective
 9 Order entered in this case or by agreement of the parties.

10 **B. Patent Local Rule 3-2(b) — Documents Evidencing Conception and**
 11 **Reduction to Practice.**

12 Copies of documents evidencing conception, reduction to practice, design and
 13 development of the claimed inventions are produced at OAGOOGL0000000001-52022,
 14 OAGOOGL0000053793-57166, and OAGOOGL0000059571-59577. Oracle also directs
 15 Google to three public websites: developer.sun.com, java.sun.com, and www.sun.com. Oracle's
 16 proprietary commercial releases will be made available for inspection subject to a Protective
 17 Order entered in this case or by agreement of the parties.

18 **C. Patent Local Rule 3-2(c) — File Histories for the Patents-in-Suit.**

19 Copies of the patent file histories are produced at OAGOOGL0000052023-52859 and
 20 OAGOOGL0000057167-59570. Certified copies of the patents and file histories are produced
 21 at OAGOOGL0000052023-52169, OAGOOGL0000052194-52253,
 22 OAGOOGL0000052270-52424, OAGOOGL0000052602-52859, OAGOOGL0000102583-
 105959, and OAGOOGL0000111357-114304.

23 _____
 24 ¹⁵ Oracle will make available source code pursuant to Patent Local Rule 3-2 for inspection by
 25 Google in accordance with the protective order. Where different versions of specific Oracle
 26 source code do not vary with respect to the claimed inventions in suit (including variants and
 27 customized versions for specific customers), Oracle will produce the earliest general version
 28 practicing the claimed invention to avoid or minimize any duplicative productions.

¹⁶ As Patent Local Rule 3-2(a) states, Oracle's production of a document as required by the rule
 shall not constitute an admission that such document evidences or is prior art under 35 U.S.C.
 § 102.

D. Patent Local Rule 3-2(d) — Ownership of the Patents-in-Suit.

Copies of documents evidencing ownership of the patent rights are produced at OAGOOGL0000053760-53792 and OAGOOGL0000056022-56028.

E. Patent Local Rule 3-2(e) — Patentee’s Asserted Practice of the Claimed Inventions.

Copies of documents sufficient to show the operation of any aspects or elements of instrumentalities Oracle relies upon as embodying the asserted claims can be found at the following three public websites: developer.sun.com, java.sun.com, and www.sun.com. Oracle’s proprietary commercial releases will be made available for inspection subject to the Protective Order entered in this case or by agreement of the parties.

Exhibit D

EXHIBIT D
Supplemental Infringement Contentions for the '447 Patent

NOTE: The infringement evidence cited below is exemplary and not exhaustive. The cited examples are taken from Android 2.2, 2.3, and Google's Android websites. Oracle's infringement contentions apply to all versions of Android having similar or nearly identical code or documentation, including past and expected future releases. Although Oracle's investigation is ongoing, the '447 patent is infringed by all versions of Android from Oct. 21, 2008 to the present, including Android 1.1, 1.5 ("Cupcake"), 1.6 ("Donut"), 2.0/2.1 ("Éclair"), 2.2 ("Froyo"), and 2.3 ("Gingerbread")¹.

The cited source code examples are taken from <http://android.git.kernel.org/>. The citations are shortened and mirror the file paths shown in <http://android.git.kernel.org/>. For example, "dalvik\vm\native\InternalNative.c" maps to "[platform/dalvik.git] / vm / native / InternalNative.c" (accessible at <http://android.git.kernel.org/?p=platform/dalvik.git;a=blob;f=vm/native/InternalNative.c>).

It appears that the Android git source code repository (accessible through <http://android.git.kernel.org/>) was created on or around Oct. 21, 2008. As such, the list of infringing Android versions may be expanded based on what Oracle learns about earlier Android versions.

Oracle has determined that Android devices execute much of the code cited below when a developer runs the Android Compatibility Test Suite (CTS), which Google requires manufacturers to execute to certify devices as Android-compatible.² The mobile device emulator that Google includes with the Android SDK³ supports Oracle's conclusion. The emulator displays log messages to inform developers of what is running on the virtual device. If the developer includes a logging command in part of a program, the emulator will output a log entry every time that part of the program is executed. A developer might use this feature, for example, to test whether an application starts to execute a particular section of code before failing. By adding logging commands to key portions of the Android source code cited below, building an Android system image, and loading the code into Google's emulator, Oracle

¹ Oracle's investigation into the extent of Gingerbread's infringement is still ongoing. Gingerbread infringes at least the computer readable medium claims as the code cited in the chart below appears in Gingerbread. For example, the GIT repository, a computer readable medium, is maintained by Google and carries the sequences of instructions listed in the chart below. Oracle continues testing to determine the circumstances under which code from the different versions of Android is executed.

² <http://source.android.com/compatibility/android-2.2-cdd.pdf> at 10 ("To be considered compatible with Android 2.2, device implementations . . . MUST pass the most recent version of the Android Compatibility Test Suite (CTS) available at the time of the device implementation's software is completed.").

³ See <http://developer.android.com/guide/developing/devices/emulator.html> ("The Android SDK includes a virtual mobile device emulator that runs on your computer. The emulator lets you prototype, develop, and test Android applications without using a physical device. The Android emulator mimics all of the hardware and software features of a typical mobile device, except that it cannot place actual phone calls.").

determined that many of these code sections are executed as part of Google's CTS testing. Thus, Android-compatible devices, when used as Google intends, execute infringing code.

The asserted claims include system, computer-readable medium, and method claims. Anyone who makes, uses, offers to sell, sells, or imports a device running Android within or into the United States directly infringes the system claims. This includes Google and its downstream licensees, including device manufacturers, carriers, application developers, and end users. Similarly, anyone who engages in the above conduct with respect to storage devices containing Android code directly infringes the computer-readable medium claims. This includes Google and its downstream licensees, including device manufacturers and application developers. Anyone who uses a device running Android code directly infringes the method claims. This includes Google and its downstream licensees, including device manufacturers, carriers, application developers, and end users. Google induces and contributes to infringement of all asserted claims by distributing Android code with the intention that it will be executed on mobile devices and by requiring that device manufacturers certify their products by running the CTS as a prerequisite for obtaining access to the Android Market software and branding, among other things. Oracle has confirmed that much of the cited code below is executed when the CTS is run. Google selectively included certain Java APIs in Android while excluding others. The fact that Google selected Java security code for inclusion in Android and has continued to include Java security code in its recent Android releases reflects the functional necessity of this code to the Android platform as a whole. Thus the code cited below is not a staple article suitable for substantial non-infringing use. Google supplies its Android code in and from the United States.

When infringement evidence first presented with respect to one claim is referred to with respect to another, the evidence is applicable because it is not limited to a particular form of infringement.

The '447 Patent	Infringed By
<p>[1-pre] 1. A method for providing security, the method comprising the steps of:</p>	<p>Android includes methods for providing security.</p> <p><i>See generally, e.g.:</i></p> <ul style="list-style-type: none"> • dalvik\vm\native\InternalNative.c • dalvik\vm\native\java_security_AccessController.c • dalvik\vm\native\java_lang_VMClassLoader.c • For Froyo: <ul style="list-style-type: none"> ○ source code files in dalvik\libcore\security\src\main\java\java\security ○ source code files in dalvik\libcore\security-kernel\src\main\java\java\security ○ dalvik\libcore\security\src\main\java\org\apache\harmony\security

```

Android APIs for “ProtectionDomain,” available at
<http://developer.android.com/reference/java/security/ProtectionDomain.html>:

```
public ProtectionDomain (CodeSource cs, PermissionCollection permissions)
```

Since: API Level 1

Constructs a new instance of `ProtectionDomain` with the specified code source and the specified static permissions.

If `permissions` is not `null`, the `permissions` collection is made immutable by calling [setReadOnly\(\)](#) and it is considered as granted statically to this `ProtectionDomain`.

The policy will not be consulted by access checks against this `ProtectionDomain`.

If `permissions` is `null`, the method [implies\(Permission\)](#) always returns `false`.

Parameters

`cs` the code source associated with this domain, maybe `null`.

`permissions` the `PermissionCollection` containing all permissions to be

statically granted to this `ProtectionDomain`, maybe `null`.

```
public ProtectionDomain (CodeSource cs, PermissionCollection permissions,
ClassLoader cl, Principal\[\] principals)
```

Since: API Level 1

Constructs a new instance of `ProtectionDomain` with the specified code source, the permissions, the class loader and the principals.

If `permissions` is `null`, and access checks are performed against this protection domain, the permissions defined by the policy are consulted. If `permissions` is not `null`, the `permissions` collection is made immutable by calling [setReadOnly\(\)](#). If access checks are performed, the policy and the provided permission collection are checked.

External modifications of the provided `principals` array has no impact on this `ProtectionDomain`.

Parameters

- | | |
|--------------------------|---|
| <code>cs</code> | the code source associated with this domain, maybe <code>null</code> . |
| <code>permissions</code> | the permissions associated with this domain, maybe <code>null</code> . |
| <code>cl</code> | the class loader associated with this domain, maybe <code>null</code> . |
| <code>principals</code> | the principals associated with this domain, maybe <code>null</code> . |

public interface Key extends Serializable {
    ...

```

E.g., “Serializable” is generally understood as:

In computer science, in the context of data storage and transmission, serialization is

the process of converting a data structure or object into a sequence of bits so that it can be stored in a file or memory buffer, or transmitted across a network connection link to be "resurrected" later in the same or another computer environment.[1] When the resulting series of bits is reread according to the serialization format, it can be used to create a semantically identical clone of the original object. For many complex objects, such as those that make extensive use of references, this process is not straightforward.

<http://en.wikipedia.org/wiki/Serialization> (footnote omitted).

Android APIs for "java.io.Serializable," available at

<http://developer.android.com/reference/java/io/Serializable.html>:

Class Overview

An empty marker interface for classes that want to support serialization and deserialization based on the `ObjectOutputStream` and `ObjectInputStream` classes. Implementing this interface is enough to make most classes serializable. If a class needs more fine-grained control over the serialization process (for example to implement compatibility with older versions of the class), it can achieve this by providing the following two methods (signatures must match exactly):

```
private void writeObject(java.io.ObjectOutputStream out) throws IOException
```

```
private void readObject(java.io.ObjectInputStream in) throws IOException,  
ClassNotFoundException
```

The '447 Patent	Infringed By
7. A method for providing security, the method comprising the steps of:	<i>See Claim 1-pre, supra.</i>
establishing one or more protection domains, wherein a protection domain is associated with zero or more permissions;	<i>See Claim 1-a, supra.</i>
establishing an association between said one or more protection domains and one or more sources of code; and	<i>See Claim 1-a and 1-b, supra.</i>
in response to executing code making a request to perform an action, determining whether said request is permitted based on a source of said code making said request and said association between said one or more protection domains and said one or more sources of code.	<i>See Claim 1-c, supra.</i>

The '447 Patent	Infringed By
8. The method of claim 7, wherein the step of establishing an association between said one or more protection domains and said one or more sources of code further includes establishing an association between said one or more protection	<i>See Claims 2, 4, and 7, supra.</i>

The '447 Patent	Infringed By
domains and said one or more sources of code and one or more keys associated with said one or more sources of code.	

The '447 Patent	Infringed By
9. The method of claim 8, wherein the step of establishing an association between said one or more protection domains and said one or more sources of code and said one or more keys associated with said one or more sources of code further includes establishing said association between said one or more protection domains and said one or more sources of code and said one or more keys associated with said one or more sources of code based on data persistently stored, wherein said data associates particular sources of code and particular keys with a set of one or more permissions.	<i>See Claims 6 and 8, supra.</i>

The '447 Patent	Infringed By
10. A computer-readable medium carrying one or more sequences of one or more instructions, the one or more sequences of the one or more instructions including instructions which, when executed by one or	The Accused Instrumentalities include devices that store, distribute, or run Android or the Android SDK, including websites, servers, and mobile devices. These encompass a computer readable medium carrying one or more sequences of one or more instructions, the one or more sequences of the one or more instructions including instructions which, when executed by one or more processors, causes the one or more processors to perform the steps described in the claim. <i>See Claim 1-pre, supra.</i>

The '447 Patent	Infringed By
more processors, causes the one or more processors to perform the steps of:	
establishing one or more protection domains, wherein a protection domain is associated with zero or more permissions;	<i>See Claim 1-a, supra.</i>
establishing an association between said one or more protection domains and one or more classes of one or more objects; and	<i>See Claim 1-b, supra.</i>
determining whether an action requested by a particular object is permitted based on said association between said one or more protection domains and said one or more classes.	<i>See Claim 1-c, supra.</i>

The '447 Patent	Infringed By
11. The computer readable medium of claim 10, wherein:	<i>See Claim 10, supra.</i>
at least one protection domain of said one or more protection domains is associated with a code identifier;	<i>See Claims 1-a and 2, supra.</i>
at least one class of said one or more classes is associated with said code identifier; and	<i>See Claims 1-b and 2, supra.</i>
the step of establishing an association between said one or more protection domains and said one or more classes of one or more objects further includes the step of	<i>See Claim 1-c and 2, supra.</i>

The '447 Patent	Infringed By
associating said one or more protection domains and said one or more classes based on said code identifier.	

The '447 Patent	Infringed By
12. The computer readable medium of claim 11, wherein said code identifier indicates a source of code used to define each class of said one or more classes.	<i>See Claim 11, supra.</i>

The '447 Patent	Infringed By
13. The computer readable medium of claim 11, wherein said code identifier indicates a key associated with each class of said one or more classes.	<i>See Claims 2, 4, and 11, supra.</i>

The '447 Patent	Infringed By
14. The computer readable medium of claim 11, wherein said code identifier indicates a source of code used to define each class of said one or more classes and indicates a key associated with each class of said one or more classes.	<i>See Claims 2, 4, and 11, supra.</i>

The '447 Patent	Infringed By
15. The computer readable medium of claim 14, wherein the step of	<i>See Claims 6 and 14, supra.</i>

The '447 Patent	Infringed By
<p>associating said one or more protection domains and said one or more classes based on said code identifier further includes associating said one or more protection domains and said one or more classes based on data persistently stored, wherein said data associates code identifiers with a set of one or more permissions.</p>	

The '447 Patent	Infringed By
<p>16. A computer-readable medium carrying one or more sequences of one or more instructions, wherein the execution of the one or more sequences of the one or more instructions causes the one or more processors to perform the steps of:</p>	<p>The Accused Instrumentalities include devices that store, distribute, or run Android or the Android SDK, including websites, servers, and mobile devices. These encompass a computer readable medium carrying one or more sequences of one or more instructions, the one or more sequences of the one or more instructions including instructions which, when executed by one or more processors, causes the one or more processors to perform the steps described in the claim. <i>See Claim 1-pre, supra.</i></p>
<p>establishing one or more protection domains, wherein a protection domain is associated with zero or more permissions;</p>	<p><i>See Claim 1 and 1-a, supra.</i></p>
<p>establishing an association between said one or more protection domains and one or more sources of code; and</p>	<p><i>See Claim 1, 1-a, and 1-b, supra.</i></p>

The '447 Patent	Infringed By
request and said association between said one or more protection domains and said one or more sources of code.	

The '447 Patent	Infringed By
17. The computer readable medium of claim 16, wherein the step of establishing an association between said one or more protection domains and said one or more sources of code further includes establishing an association between said one or more protection domains and said one or more sources of code and one or more keys associated with said one or more sources of code.	<i>See Claim 16, supra.</i>

The '447 Patent	Infringed By
18. The computer readable medium of claim 17, wherein the step of establishing an association between said one or more protection domains and said one or more sources of code and said one or more keys associated with said one or more sources of code further includes establishing said association between said one or more protection domains and said one or more sources of code and said one or	<i>See Claim 17, supra.</i>

The '447 Patent	Infringed By
more keys associated with said one or more sources of code based on data persistently stored, wherein said data associates particular sources of code and particular keys with a set of one or more permissions.	

The '447 Patent	Infringed By
19. A computer system comprising:	The Accused Instrumentalities include devices that run Android or the Android SDK. Devices running Android or the Android SDK are computer systems. <i>See Claim 1, supra.</i>
a processor;	Devices running Android and computers running the Android SDK have processors.
a memory coupled to said processor;	Devices running Android and computers running the Android SDK have a memory coupled to said processor.
one or more protection domains stored as objects in said memory, wherein each protection domain is associated with zero or more permissions;	<i>See Claim 1 and 1-a, supra.</i>
a domain mapping object stored in said memory, said domain mapping object establishing an association between said one or more protection domains and one or more classes of one or more objects; and	<i>See Claim 1, 1-a, and 1-b, supra.</i>
said processor being configured to determine whether an action requested by a particular object is permitted based on said association between said one or more protection domains and said one or more classes.	<i>See Claim 1 and 1-c, supra.</i>

The '447 Patent	Infringed By
20. The computer system of claim 19, wherein:	<i>See Claim 19, supra.</i>
at least one protection domain of said one or more protection domains is associated with a code identifier;	<i>See Claim 2, supra.</i>
at least one class of said one or more classes is associated with said code identifier; and	<i>See Claim 2, supra.</i>
said computer system further comprises said processor configured to establish an association between said one or more protection domains and said one or more classes of one or more objects by associating said one or more protection domains and said one or more classes based on said code identifier.	<i>See Claim 2, supra.</i>

The '447 Patent	Infringed By
21. The computer system of claim 20, wherein said code identifier indicates a source of code used to define each class of said one or more classes.	<i>See Claims 2 and 20, supra.</i>

The '447 Patent	Infringed By
22. The computer system of claim 20, wherein said code identifier indicates a key associated with each class of said one or more classes.	<i>See Claims 2, 4, and 20, supra.</i>

The '447 Patent	Infringed By
23. The computer system of claim 20, wherein said code identifier indicates a source of code used to define each class of said one or more classes and indicates a key associated with each class of said one or more classes.	<i>See Claims 2, 4, and 20, supra.</i>

The '447 Patent	Infringed By
24. The computer system of claim 20, further comprising said processor configured to associate said one or more protection domains and said one or more classes based on said code identifier by associating said one or more protection domains and said one or more classes based on data persistently stored in said computer system, wherein said data associates code identifiers with a set of one or more permissions.	<i>See Claims 2, 6, and 20, supra.</i>

Exhibit E

EXHIBIT G**Supplemental Infringement Contentions for US 7,426,720 ('720 Patent)**

NOTE: The infringement evidence cited below is exemplary and not exhaustive. The cited examples are taken from Android 2.3 and current versions of Google's Android websites. Oracle's infringement contentions apply to all versions of Android having similar or nearly identical code or documentation, including past and expected future releases. Although Oracle's investigation is ongoing, the '720 patent is infringed by all versions of Android from Oct. 21, 2008 to the present, including Android 1.1, 1.5 ("Cupcake"), 1.6 ("Donut"), 2.0/2.1 ("Éclair"), 2.2 ("Froyo"), and 2.3 ("Gingerbread").

The cited source code examples are taken from <http://android.git.kernel.org/>. The citations are shortened and mirror the file paths shown in <http://android.git.kernel.org/>. For example, "dalvik\vm\native\InternalNative.c" maps to "[platform/dalvik.git] / vm / native / InternalNative.c" (accessible at <http://android.git.kernel.org/?p=platform/dalvik.git;a=blob;f=vm/native/InternalNative.c>).

It appears that the Android git source code repository (accessible through <http://android.git.kernel.org/>) was created on or around Oct. 21, 2008. As such, the list of infringing Android versions may be expanded based on what Oracle learns about earlier Android versions.

Oracle has determined that Android devices execute much of the code cited below every time the devices start up. Other cited code is invoked when a developer runs the Android Compatibility Test Suite (CTS), which Google requires manufacturers to execute to certify devices as Android-compatible.¹ The mobile device emulator that Google includes with the Android SDK² supports Oracle's conclusion. The emulator displays log messages to inform developers of what is running on the virtual device. If the developer includes a logging command in part of a program, the emulator will output a log entry every time that part of the program is executed. A developer might use this feature, for example, to test whether an application starts to execute a particular section of code before failing. By adding logging commands to key portions of the Android source code cited below, building an Android system image, and loading it into Google's emulator, Oracle determined that many of these code portions are executed even before a user can interact with a device. Thus, Android-compatible devices, when used as Google intends, execute infringing code.

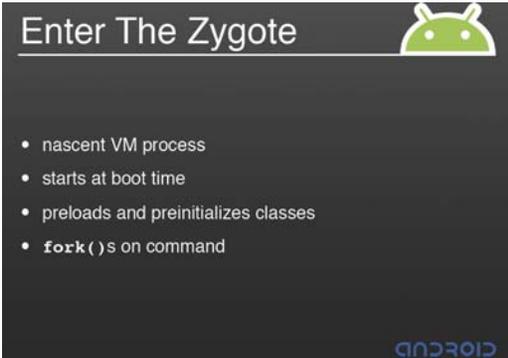

¹ <http://source.android.com/compatibility/android-2.2-cdd.pdf> at 10 ("To be considered compatible with Android 2.2, device implementations . . . MUST pass the most recent version of the Android Compatibility Test Suite (CTS) available at the time of the device implementation's software is completed.").

² See <http://developer.android.com/guide/developing/devices/emulator.html> ("The Android SDK includes a virtual mobile device emulator that runs on your computer. The emulator lets you prototype, develop, and test Android applications without using a physical device. The Android emulator mimics all of the hardware and software features of a typical mobile device, except that it cannot place actual phone calls.").

The asserted claims include system, method, and computer-readable storage medium claims. Anyone who makes, uses, offers to sell, sells, or imports a device running Android within or into the United States directly infringes the system claims. This includes Google and its downstream licensees, including device manufacturers, carriers, application developers, and end users. Similarly, anyone who engages in the above conduct with respect to storage devices containing Android code directly infringes the computer-readable storage medium claim. This includes Google and its downstream licensees, including device manufacturers, carriers, application developers, and end users. Anyone who uses a device running Android code directly infringes the method claims. This includes Google and its downstream licensees, including device manufacturers, carriers, application developers, and end users. Google induces and contributes to infringement of all asserted claims by distributing Android code with the intention that it will be executed on mobile devices. The Android code cited below necessarily infringes when it runs because its zygote process performs copy-on-write process cloning. Moreover, much of the code cited below is executed not only as applications run, but every time a device running Android starts up. Thus Android is not a staple article suitable for substantial non-infringing use. Google supplies its Android code in and from the United States.

When infringement evidence first presented with respect to one claim is referred to with respect to another, the evidence is applicable because it is not limited to a particular form of infringement.

The '720 Patent	Infringed By
1.pre. A system for dynamic preloading of classes through memory space cloning of a master runtime system process, comprising:	The Accused Instrumentalities include systems that run Android or the Android SDK. They encompass a system running Android for dynamic preloading of classes through memory space cloning of a master runtime system process. An example of a master runtime system process is a zygote process, which creates a Dalvik virtual machine instance and which forks upon request to create new Dalvik virtual machine instances for various applications.
1.a. A processor;	A processor of a computer or smartphone running Android.
1.b. A memory	A memory of a computer or smartphone running Android.
1.c. a class preloader to obtain a representation of at least one class from a source definition provided as object-oriented program code;	Android includes a class preloader to obtain a representation of at least one class from a source definition provided as object-oriented program code. <i>See</i> Presentation slides corresponding to the Dalvik Video: “Dalvik Virtual Machine Internals, Google I/O 2008,” by Dan Bornstein, http://sites.google.com/site/io/dalvik-vm-internals/2008-05-29-Presentation-Of-Dalvik-VM-Internals.pdf (“Dalvik Presentation”), at slide 25; and corresponding Video: “Google I/O 2008 - Dalvik Virtual Machine Internals,” by Dan Bornstein, http://developer.android.com/videos/index.html#v=ptjedOZEXPM (“Dalvik
